Our services

- General dentistry
- Cosmetic dentistry
- Hygiene treatments
- Referral dentistry

GENERAL DENTISTRY

What is general dentistry?

General dentistry covers a range of treatment options and procedures to protect and maintain your oral health. This typically includes:

- Regular check-ups
- Fillings
- Crowns & bridges
- Dentures
- Root canal treatment
- Extractions
- Periodontal treatment

All general treatments must be prescribed by a GDC-registered dentist, so your first step is to book an adult **check-up** online via our website. These are only £45 for adults, and are FREE for under 18's at Hampton Dental Care.

Your general dentistry journey

Step 1: Your check-up

Step 2: Treatment (if required)

Step 3: Your FREE check-up reminder

COSMETIC DENTISTRY

What is cosmetic dentistry?

Do you want to improve the appearance of your teeth? Unlike general dentistry, cosmetic treatments are aimed at improving the appearance of your teeth and smile. This typically includes one or more of:

- Composite bonding
- Teeth whitening
- Veneers
- Clear aligners

Whether you want to improve the appearance of one tooth, or would like a complete smile makeover, your first step is to book a **check-up + cosmetic consultation** appointment online via our website. These are only £60.

Your cosmetic dentistry journey

Step 1: Your check-up + cosmetic consultation

Step 2: Your treatment

Step 3: You show the world your new smile

HYGIENE TREATMENTS

What are hygiene treatments

Hygiene treatments are a professional cleaning of your teeth to help maintain your oral health and prevent tooth decay, bleeding gums, gum disease and tooth loss. They also keep your teeth and gums looking and feeling amazing. These treatments are:

- Scale & polish (£50)
- Air polish (£69)

Patients can book either of these appointments without first attending a check-up or a check-up + cosmetic consultation appointment. **These are both available to book online via our website.**

Scale & polish

A scale & polish uses a hand scaler, and ultrasonic scaler where necessary, to remove deposits of plaque and calculus on the teeth and the gum line. The dentist then polishes the teeth using a special paste to leave them bright and shiny

Air polish

Air polishing gently applies a targeted jet of compressed air, water and specially formulated powder to expertly remove tooth staining, plaque and calculus from the surfaces of the teeth and the gum line. It's a pain-free and non-invasive procedure so it's also suitable for patients who may have sensitive teeth and gums. It's more comfortable, quicker and more effective than a scale & polish

REFERRAL DENTISTRY

What is referral dentistry?

If you've been told you need endodontic treatment (root canal), your dentist may choose to refer you for this. Hampton Dental Care has an in-house team to carry out referred endodontic (root canal treatment, or re-root canal treatment). We'll carry out your treatment using the most advanced technology and instruments available.

You can either be internally referred by your Hampton dentist, or if diagnosed at another practice, ask your dentist to refer you to Hampton Dental Care for your treatment using the forms on the **REFERRAL DENTISTRY** page on our website.

Your referral dentistry journey
